# Digital Solutions Professional Services

## ACCELERATE YOUR TIME TO VALUE

You've discovered that Stantec's digital science, engineering, and design products can revolutionize your business. Now you need to implement. We help you align on a vision, push the boundaries of our technology in your implementation, and unlock more value from Stantec's science, engineering, and design technology.

Our Professional Services Team offers expert guidance at every step of your digital transformation journey. We'll help you accelerate your time to value by integrating into your existing business platform.

When we launch a new product, we think about more than getting that product into the hands of people who need it. We're focused on making sure that product is doing all the things you want it to do. And that involves more than simply selling you a license or subscription. It means working with you to understand your business needs and how this product will fit into your existing operations.

We work hand in hand with you to implement our digital products, integrating them into your current system and workflows, and customizing as needed to fit your business models and goals. Our Professional Services Team is your partner in digital solution success.

**DIGITAL  
TRANSFORMATION  
IS A JOURNEY. OUR  
PROFESSIONAL  
SERVICES TEAM  
SUPPORTS YOU AT  
EVERY STEP.**

## OUR DIGITAL SOLUTIONS PROFESSIONAL SERVICES TEAM DELIVERS

### Faster outcomes

Reach your business outcomes faster by partnering with experts committed to your long-term digital science, engineering, and design success.

### Faster innovation

Continue to innovate through new ways of working and establishing a foundation to get from vision to value faster.

### Faster go-live

Implement more quickly by adopting best practices and oversight using out-of-the-box functionality based on Stantec's Connect platform.

# Connect

Stantec.io

Stantec's Connect platform contains all of the building blocks needed to build enterprise-level digital solutions. These consistent, connected, and secure building blocks include services for cloud-scale parallel computing, machine learning and analytics, Internet of Things connectivity, and a growing catalog of microservices that allow you to reimagine the possibilities of digital-assisted science, engineering, and design.
